

The background of the entire slide is a close-up, slightly blurred photograph of numerous soft-shell clams. The shells are light-colored, ranging from off-white to pale yellow, and show the characteristic concentric growth lines. The clams are piled together, creating a textured, organic pattern.

SOFT-SHELL CLAMS: EFFECTS OF PREDATION AND COASTAL ACIDIFICATION ON WILD AND CULTURED POPULATIONS

A PRESENTATION BY DR. BRIAN BEAL,
UNIVERSITY OF MAINE AT MACHIAS
