

The background of the entire slide is a close-up photograph of a sandy beach. The sand is light-colored and densely packed with numerous small, multi-colored plastic particles, known as microplastics. These particles vary in shape and size, including small fragments, fibers, and tiny beads in shades of blue, green, orange, and white. The overall appearance is that of a heavily polluted natural environment.

MICROPLASTICS IN THE GULF OF MAINE
